

# PANEL FACE FINISH OPTIONS

Cardinal Acoustics wood fiber products are available in any of the following finishes:

## Cardinal Acoustics Raw Unpainted

Cardinal Acoustics raw unpainted panels are the most affordable and durable sound absorption style we offer. These panels are ideal for applications where they are custom field painted, or in industrial settings where the unpainted panels are less visible. Note that the sound absorption quality of raw unpainted panels is equal to that of painted panels.

The color and tone of the raw unpainted panels is derived from the natural poplar fibers used in the manufacturing process. Some sections of poplar wood are more pigmented than others, and as a result of this variation, the raw unpainted panels display inconsistencies from one panel face to the next. Though visible, these variations are not indicative of imperfection or lower sound absorption performance.

## Cardinal Acoustics Painted Natural or Painted White

### PAINTED NATURAL:

- Professionally painted in Sherwin Williams 9110 Malabar, our painted natural panels channel and embrace the natural color of the poplar wood fiber from which they are constructed.
- This color is ideal for applications where a natural, calming, and warm aesthetic is desired.

### PAINTED WHITE:

- Professionally painted in Sherwin Williams 7005 Pure White, our white panels offer a clean, fresh appearance.
- This color is ideal for applications in which a modern, sleek and spotless aesthetic is desired.

## Cardinal Acoustics Custom Painted

We can professionally paint any of our wood fiber panels to match custom colors of any paint manufacturer to suit each project's unique aesthetic requirements.

**We offer superior-quality sound absorption, fast, 2 to 4-week lead time, with no minimums, and unparalleled customer service for all our products.**
